

Editorial

The first issue of the eleventh volume of JIDM brings a section with extended and revised versions of the best papers from the VII Symposium on Knowledge Discovery, Mining and Learning – KDMiLe, which was held in Fortaleza, Ceará, during October 07-10, 2019. Elaine Ribeiro de Faria Paiva served as the guest editor of KDMiLe. She was in charge of selecting the best papers from the symposium and conducting the evaluation process. In addition to a regular article, Spatial Operations on Uncertain Positional Data.

Section KDMiLe 2019 includes extended and revised versions of six select papers from the symposium. KDMiLe is a series of annual scientific meetings aimed at integrating researchers, practitioners, developers, students and users to present their research results, to discuss ideas, and to exchange techniques, tools, and practical experiences related to the Data Mining and Machine Learning areas. Most contributions to KDMiLe have a strong connection to data and information management, commonly focused on spotting information/patterns from raw data or preprocessing data to help analyses of this kind. The articles included in this edition exemplify this characteristic, covering a diverse range of themes.

We would like to thank everybody who contributed to this edition of JIDM, particularly reviewers for their valuable comments and authors for their contributions and hard work in preparing their final manuscripts. We hope you enjoy this issue of JIDM!
